Industry-Leading Slicing and Packaging Line Solutions.

Equipment, Technology, and Services Built for Your Bacon Production.

Creating the perfect bacon package.

Thermoforming Bacon Packaging, Built on Decades of Experience

MULTIVAC's high-output thermoforming packaging equipment has dominated the market for decades and continues to set the benchmark with innovative and resource-saving technology. All built with hygienic design and backed by an exceptional service team.

Centralized Operation of the Line with MULTIVAC Line Control

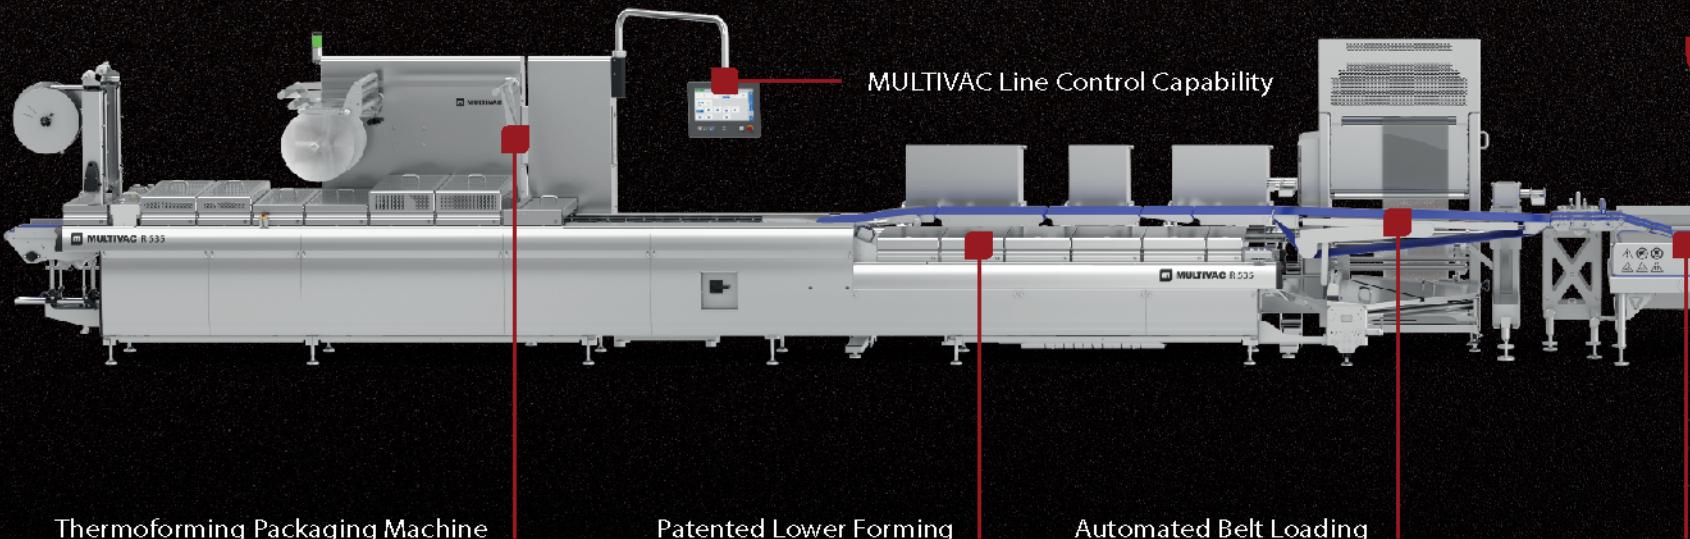

Ensure reliable and reproducible processes with minimized operational errors with central control for the entire production line. From the slicer to the end of line palletizer, maintain full control through any HMI terminal, allowing for machine startup, shutdown, and product changeover at the touch of your fingers.

Ideal Packages with Certified Packaging Materials

Ensure the highest quality package for your products with certified packaging materials from MULTIVAC. Customizable to create your ideal bacon package, supporting various formats and material types including recyclable film.

Automated Systems for Production Optimization

MULTIVAC belted loading solutions and patented lower forming, deliver smooth, continuous product transfer into the packaging machine. The hygienic design and controlled motion ensures accurate and uniform spacing for optimized throughput and protecting overall product quality. MULTIVAC's end-of-line automation brings together equipment for marking, inspection, case packing, and palletizing in one complete system, ensuring products are securely prepared for shipment.

Processing technology to make bacon better.

Nobody does bacon better than the equipment innovators at Provisur

Our cutting-edge design helps bacon processors optimize pressing, scanning, and slicing. From start to finish, count on our best-in-class bacon line solutions to help streamline production, increase yields, and deliver profit-boosting results.

Increased Yield and Precision with Intelligent TrimX®

Provisur's Hoegger® TrimX® meat sizing system has been engineered to increase yield and increase slicer throughput resulting in more #1 slices from each belly with less debris.

Innovative Bacon Slicing with the CashinSX™

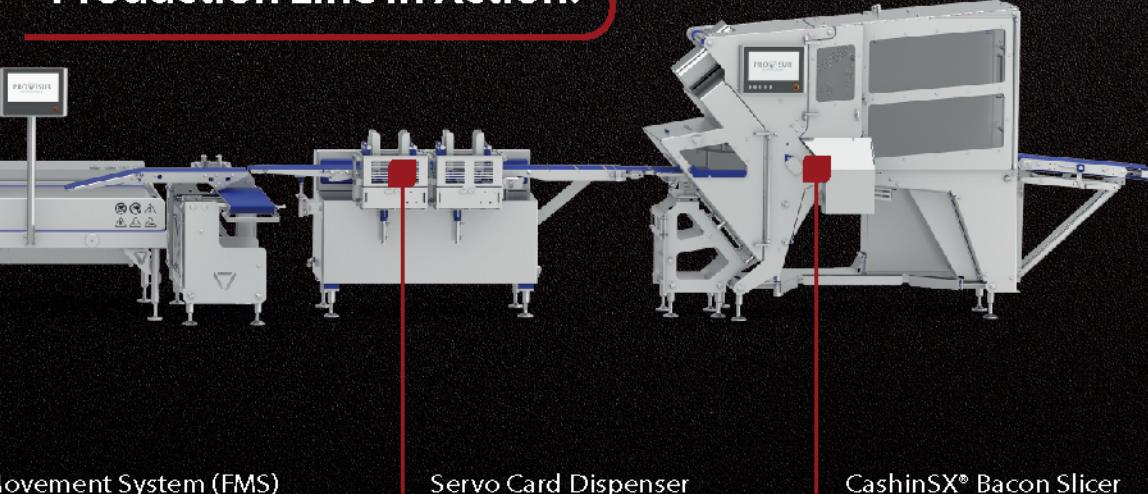

The new CashinSX combines the best of the Cashin and SX platforms to provide maximum slicing performance for retail and food service bacon applications. Next-generation features allow for superior weight control, accurate slice counts, and consistent slice thickness – improving yields, throughput, and quality for bacon processors.

Innovative Portion Handling with Formax Free Movement System (FMS)

The FMS utilizes free floating movers riding on an electromagnetic table top to transfer boarded bacon drafts from the slicer to the packaging machine. The system takes a single lane of product, automatically folds the card flaps, rotates each draft 180°, and discharges two lanes of portions to the horizontal loader while ensuring draft integrity.

Better Together

Bacon Production Line Solutions

Provisur & MULTIVAC offer fully integrated automated line solutions for bacon production—from belly sizing to fully inspected consumer-ready packaging in the case. Our solutions deliver unmatched technology and performance in every segment of the line.

Our cutting-edge, industry-leading slicing and packaging solutions are proven and crafted from the decades of expertise shared between our organizations. Our solutions ensure precision and reliability across the board for retail and food service bacon. Backed by the industry's most comprehensive service team with around-the-clock support to address your needs whenever they arise. The technology and equipment integrate flawlessly, optimizing and enhancing your operations to drive your long-term production success.
